

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-3 (canceled)

Claim 4 (previously presented): A heat storage device comprising:

a heat storage tank charged with a heat transfer medium which also serves as a heat storage material for storing the heat supplied from the outside;

a heat transport device which execute an injection and an extraction of heat between the inside of the heat storage tank and the outside by the inflow and the outflow of said heat transfer medium, said heat transport device being disposed so as to execute a heat transport between the central portion in said heat storage tank and the outside; and

suppressing means for suppressing the natural convection of the heat storage material, said suppressing means being disposed in the outer portion in the heat storage tank.

Claim 5 (canceled)

Claim 6 (currently amended): A heat storage device according to claim 4, wherein:

[[as]] ~~the suppressing means, a property of increasing~~ increases viscosity by the application of voltage and is provided for the heat storage material or the heat transfer medium in the outer portion in the heat storage tank; and

means for applying power between a pair of electrodes is ~~further~~ provided, as the suppressing means, on opposite sides of the outer portion in the heat storage tank so as to sandwich said outer portion.

Claim 7 (currently amended): A heat storage device according to claim 4, wherein:

[[as]] ~~the suppressing means, a property of increasing~~ increases viscosity by the application of a magnetic force and is provided for the heat storage material or the heat transfer medium in the outer portion in the heat storage tank; and

a magnet for exerting the magnetic force is ~~further~~ provided, as the suppressing means, in the outer portion in the heat storage tank.

Claim 8 (currently amended): A heat storage device according to claim 4, ~~further comprising: wherein the suppressing means comprises~~ a barrier, ~~as suppressing means,~~ for hindering the natural convection of the heat storage material or the heat transfer medium, said barrier being disposed in the outer portion in the heat storage tank.

Claim 9 (previously presented): A heat storage device according to claims 3 or claim 4, further comprising:

means for promoting a heat transfer, said means being disposed between the central portion and the outer portion in the heat storage tank.
